1 Test Document

This is a test document to demonstrate the LaTeX compilation wrapper.

1.1 Exercise with Missing Subvariants

1.
   - Subvariant 1 - Placeholder Content
   - This is a fallback subvariant generated automatically
   - Original subvariant file was not found

2.
   - Subvariant 2 - Placeholder Content
   - This is a fallback subvariant generated automatically
   - Original subvariant file was not found

3.
   - Subvariant 3 - Placeholder Content
   - This is a fallback subvariant generated automatically
   - Original subvariant file was not found

1.2 Expected Behavior

The wrapper should:

- Detect the missing subvariant_1.tex, subvariant_2.tex, and subvariant_3.tex files

- Create placeholder files automatically

- Compile the document successfully

- Clean up the placeholder files (unless –no-cleanup is used)
